

## For insurers, brokers and lenders

Independent yacht survey · condition and valuation reports

ABYC Professional Member · Yacht Captain (149 GT) · STCW · Türk Loydu Sale & Purchase Survey Certificate · MSFAU Yacht Design Certificate

### Report

A 70+ page photographic report. Each finding carries an A, B or C urgency grade, its location and the recommended action; moisture, thickness, electrical and sea trial readings are tabled. Reports are issued in English or Turkish.

### Delivery

Delivered digitally within 2-3 working days of the on-site inspection.

### Scope

Non-destructive inspection: nothing is dismantled, and inaccessible areas are recorded with the reason. Compression and blowby are a separate service coordinated with an independent engine technician. For reliable moisture readings the boat is kept ashore and dry for at least one week.

### Condition and valuation

A condition survey documents the boat's technical condition and findings. A valuation sets out an estimated market value from that condition and market data. Either or both can be commissioned to suit your requirements.

### How we work

Instructions come from the institution or the owner; access and haul-out are arranged with the owner. The report belongs to the party that pays for it and is not shared with third parties without written consent. If you have a required format or mandatory sections, send them before work starts and the report is prepared to that structure.

### Area

Turkey's Aegean and Mediterranean coasts, Istanbul and the Marmara; Greek islands by arrangement.
